Chapter 1

Context: The Place of Information and Communication

Technologies for Development (17,950 words)

Tim Unwin

1.1 Development Agendas

- 1.1.1 Liberal democracy and the free market: the dominant discourse and practice of 'development'
- 1.1.2 An interconnected world: globalisation, world systems, and space-time

1.2 Information and Knowledge Societies

- 1.2.1 Mythologies of Ages: Information and Knowledge Societies
- 1.2.2 Interests in information and knowledge
- 1.2.3 A world of difference: digital divides and knowledge economies

1.3 Technological Interests and Social Change

Chapter 2

Information and Communication in Development Practices

(18,902 words)

Tim Unwin

2.1 Information and Communication in Development

- 2.1.1 A framework for considering the information and communication needs of development stakeholders
- 2.1.2 Traditional knowledge systems
- 2.1.3 Media in development: the role of theatre, dance and cinema

2.2 Information in Development Practice

2.2.1 What is information for development?

2.2.2 Information needs in development

2.2.3 Accessing and managing information

2.3 Effective Communication in Development Practice

2.3.1 Theorising effective communication

2.3.2 Means of communication

2.3.3 Communication in development practice

2.4 Access, Understanding and Relevance

Chapter 3

The Technologies: Identifying Appropriate Solutions for 'Development' Needs

(21,842 words)

Tim Unwin

3.1 Information and Communication Technologies: a Conceptual Framework

3.1.1 A digital world

3.1.2 Capture, storage and information sharing: the importance of infrastructure and regulation

3.1.3 Individual and communal technologies

3.2 The Capture and Storage of Information

3.2.1 The changing place of libraries

3.2.2 Film, video and audio materials

3.2.3 The power of the internet and the World Wide Web

3.3 The Physical Infrastructure

3.3.1 Cables and wires

3.3.2 Wireless solutions

3.3.3 Satellites

3.3.4 Energy and environmental sustainability

3.4 User Interfaces and Information Sharing

- 3.4.1 Telephones
- 3.4.2 Computer technologies
- 3.4.3 Beyond laptops: convergence and the new generation of mobile devices
- 3.4.4 Radios and television: the contribution of broadcast media
- 3.5 Individuals and Communities: debates over software and content**
- 3.5.1 Software solutions: Proprietary, Free and Open Source
- 3.5.2 Open educational resources
- 3.6 Conclusions**

Chapter 4

The Practical Implementation of ICT4D Initiatives

(17,943 words) Tim Unwin

4.1 Global ICT4D Initiatives

- 4.1.1 The institutional origins of ICT4D initiatives: the ITU, G8, World Bank and United Nations
- 4.1.2 The World Summit on the Information Society and its aftermath
- 4.1.3 Donor policies towards ICT4D

4.2 ICT4D National Policies and Strategies

- 4.2.1 Asian-Pacific e-strategies
- 4.2.2 ICT strategies and policies in Latin America
- 4.2.3 The African context

4.3 Multi-stakeholder Partnerships and the Implementation of ICT4D Initiatives

- 4.3.1 The role of the private sector in development practice
- 4.3.2 The regulatory environment
- 4.3.3 Balancing supply and demand in ICT4D programmes
- 4.3.4 Towards a framework for multi-stakeholder partnerships

4.4 Delivering Effective ICT4D Partnerships

Chapter 5

ICTs, Enterprise and Development

Michael Best and Charles Kenny

(13,481 words including references and case studies)

5.1 Introduction: ICT Industries and ICT Use

5.2 ICTs and Economic Development

5.2.1 The role of information in markets

5.2.2 The ICT industry in the macro-economy

5.3 The Scale of ICT Use in the Developing World

5.3.1 Mass media

5.3.2 Telecommunications

5.4 The Macro-economic Impact of Use

5.5 The Micro-economic Impact of Use

5.5.1 Telecommunications

5.5.2 The internet

5.6 Conclusions

5.6.1 Success factors for ICT industry expansion: building an ICT industry

5.6.2 Success factors for ICT use: macro-economic factors enhancing investment, diffusion and use

5.6.3 Success factors for ICT use: micro-economic factors affecting efficiencies and effectiveness

5.6.4 ICTs and economic growth: the way forward

Chapter 6

ICT in Education: Catalyst for Development

Michelle Selinger

(20,344 words including references and case studies – needs to be reduced)

6.1 Introduction

6.2 The State of Education in Developing Countries

6.2.1 Data sources and comparators

6.2.2 The role of ICT in education

6.3 Developing and Implementing New Educational Models

6.3.1 Basic enablers for education success

6.3.2 Socio-economic framework

6.3.3 The education model

6.3.4 Professional development of teachers

6.3.5 School leadership and change management

6.3.6 Curriculum and assessment

6.3.7 Infrastructure

6.3.8 Monitoring and evaluation

6.4 External involvement in Enhancing Educational Delivery

6.4.1 The role of the private sector

6.4.2 Special needs

6.4.3 Beyond basic education

6.5 Conclusion

Chapter 7

e-Health: Information and Communication Technologies for Health

S. Yunkap Kwankam, Ariel Pablo-Mendez and Misha Kay

(13,943 words without case studies)

7.1 Introduction

7.2 Definitions of e-Health

7.3 Historical Development of e-Health

7.3.1 The internet, decision support systems, and electronic health record

7.3.2 Landmark events in e-health

7.4 The Contemporary e-Health Landscape

7.4.1 The potential of health telematics

7.4.2 A global survey of e-health

7.4.3 Foundation and enabling actions for e-health

7.4.4 Primary impact areas: WHO priorities

7.4.5 e-Health in the Knowledge Economy

7.4.6 Trade in health services

7.4.7 Gender and e-health

7.4.8 Other e-health activities

7.4.9 Spending on e-health

7.5 Assessing the Impact of e-Health

7.5.1 Goals and functions on the health systems

7.5.2 Making a stronger case for telemedicine

7.5.3 Appropriate assessment frameworks and tools

7.6 Limitations of e-Health

7.7 The Future of e-Health

7.7.1 Mobile/ubiquitous computing

7.7.2 Challenges

7.7.3 Strategic driving forces

7.8 Conclusions

7.8.1 A role for WHO

Chapter 8

e-Government and e-Governance

James Guida and Martin Crow

(15,794 words)

8.1 Introduction

8.2 e-Government: Evolution and Challenges

8.2.1 Forces driving the demand for e-government

8.2.2 The potential benefits of e-government in a development context

8.2.3 The phases of e-government

8.2.4 The e-government context

8.3 The Technologies

8.3.1 Architecture

8.3.2 Networks

8.3.3 Applications

8.3.4 The technology system

8.4 e-Governance as management of IT implementations in government

8.4.1 Introduction

8.4.2 The management of IT implementations in government

8.4.3 Assessing user demand and capacity

8.4.4 Readiness assessment and strategy formulation

8.4.5 e-Leadership

8.4.6 Establishing a governance structure

8.4.7 Capacity building and change management

8.4.8 Costing and financing

8.4.9 The enabling environment: legal, regulatory, privacy, security and information policy

8.5 e-Governance as Transformation of the Relationship of Government to Citizens in an Information Society

8.5.1 Introduction

8.5.2 e-Strategy

8.5.3 Stakeholders

8.6 Key Issues in Formulating a Development and Reform-based e-Governance Strategy

8.6.1 Improving public services and making services work for the poor

8.6.2 Reforming public sector institutions and civil service management

8.6.3 Improving public resource mobilization and expenditure management

8.6.4 Strengthening governance, accountability and transparency

8.6.5 Reforming public procurement and project implementation functions

8.6.6 Managing effective decentralization

8.6.7 Improving institutional knowledge management and learning systems

8.6.8 Improving the policy formulation process

8.6.9 Enhancing SME competitiveness and improving the overall business environment

8.6.10 Strengthening social participation and democracy

8.7 Conclusion

Chapter 9

ICT for Rural Development

Bob Day and Peter Greenwood

(24,387 words without case studies – will need to be reduced substantially – I am trying to do this in my editing now)

9.1 Introduction

9.2 Stakeholder Issues

9.2.1 Overview of the status of the global development process

9.2.2 Status of the global rural development process

9.3 ICTs for Rural Development: Beginnings

9.3.1 Hope and hype

9.3.2 Lessons learned?

9.3.3 Challenges Related to ICTs for Rural Development

9.4 Emerging Possibilities

9.4.1 Access strategies

9.4.2 Open standards and open technology

9.4.3 Content creation

9.4.4 Knowledge systems

9.4.5 A systematic approach

9.5 ICT4RD: Some Future Scenarios

9.5.1 Our urban-centric mindsets

9.5.2 Impact of global climate change on rural areas

9.5.3 Responses to global climate change

9.5.4 Rural components of global climate change mitigation

9.6 ICTs, KM and a new shared vision for rural development

Chapter 10

Conclusions

Tim Unwin
